

## Innovative features for comfortable protection.

The modern, fashionable design of the uvex pheos makes it ideal for everyday wear in the industrial workplace.

In addition to an attractive design, this safety spectacle incorporates highly innovative technology: the core component is the duo-spherical lens, which not only offers a wide field of vision but is extremely scratch-resistant on the outside and permanently anti-fog on the inside thanks to uvex's unique coating technology.

①

### Scratch-resistant and anti-fog.

The supravision HC-AF coating technology makes the uvex pheos lens highly scratch-resistant on the outside and permanently anti-fog on the inside. It also provides 100 % UV protection.

②

### Optimal eye coverage.

The duo-spherical lens has additional curvature at the upper edge providing an integral brow guard for additional coverage.

③

### PPE compatibility.

Low profile side arms deliver high level compatibility with other PPE, e.g. ear defenders, helmets and bump caps.

④

### Practical feature.

A special slot in the ear pieces makes it possible to attach a hang cord to the spectacles.

⑤

### Enhanced ventilation.

The unique side arm design provides exceptional ventilation – helping to improve the climate around the eye.

⑥

### High performance hinges.

The metal-free hinges fold effortlessly and consistently smooth movement of the side arms is guaranteed through the use of innovative materials.

### Comfortable and secure.

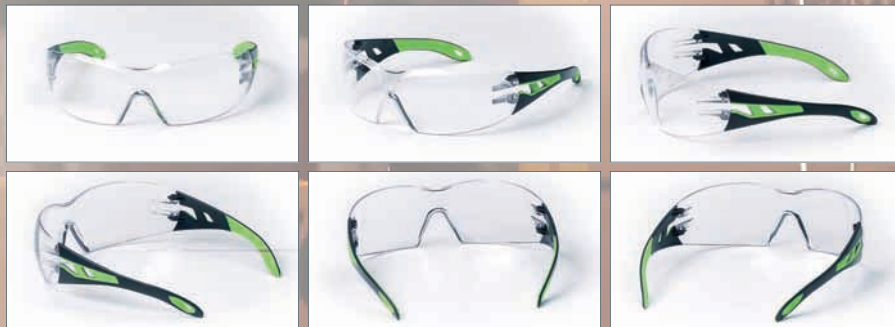

The innovative hard/soft technology used for the side arms delivers outstanding comfort and stability.
